

Our vision

To provide a smoke free environment for service receivers, visitors and staff.

Strategic priorities

Our priorities have been written after consultation with Stakeholders and are influenced by National policy and Public Health Derbyshire. Our five key strategic priorities have been developed to support the implementation of the Smoking Cessation Policy and to promote the prevention agenda.

Our priorities are:

1. To be compliant with NICE Guidelines PH48 (2013)
2. To comply with smoke-free legislation (Health Act, 2006)
3. To achieve a whole trust and health economy approach to smoke free environments
4. To promote the health and wellbeing of service receivers and staff by being able to provide support to those who wish to either quit smoking or reduce their use of tobacco
5. To ensure people understand the importance of physical health in their overall well-being
6. To work towards closing the morbidity and mortality gap.

Our Core Standards

People who use the services of the Trust have the right and expectation to the following core care standards:

- **Keeping yourself and others safe:** We will help you and others to be as safe as you can be
- **Assessment:** We will find out with you what your needs are
- **Care planning:** You will have a clear care plan
- **Review:** We will check that things are working for you
- **Co-ordination:** Your care will be co-ordinated
- **Discharge & transfer:** We will make sure your transfer or discharge works well
- **Families and carers:** We will work with families and carers
- **Involvement and choice:** You will be involved as much as you want and are able to be.

Outcomes

In implementing this strategy we will contribute to the wider Trust Strategy:

For service receivers

- Better and easier access to smoking cessation advice and support
- Better access to appropriately trained staff
- A feeling that you are listened to
- Healthier environment for all
- Better access to information.

For staff:

- Appropriate training to ensure you have the right skills to support those you care for
- Knowledge that you are supported and can access help when required
- Access to best evidence and research
- Ability to evidence the interventions you have made.

What can I do to help create a smoke free environment?

- Attend smoking cessation training and commit to use it in my practice
- Proactively act, listen and record your response in the smoking cessation care plan
- Spread the health promotion message
- 'Make every contact count' – it may not always be a patient it may be a member of their family or team member
- This is not just for clinical staff, everyone needs to be aware, be a role model and feel supported to challenge people who are smoking on our premises.

Top Priorities 2017 - March 2019 (the first 18 months)

- Launch the revised Nicotine Management Policy (smoking cessation)
- To ensure all our staff are trained appropriate to their role
- Develop and deliver a communications plan which continually promotes the message
- Continue to promote fair access and parity of esteem for our service receivers
- To work collaboratively with pharmacy and other smoking cessation services to have the right products in place to help us achieve our goal
- To promote the importance of recording assessments and interventions, having regular performance feedback to teams in order that they can assess their impact
- Develop an evaluation and feedback mechanism for service receivers, carers and staff to help us develop a person centred approach
- To reduce the fire risk from breaches of the policy and reduce smoking related incidents
- A focus on prevention and reducing risky behaviours (including smoking) in our early intervention services in accordance with the LESTER tool.

By 2020 our success will be measured by:

- 95% of all staff trained to Level 1 smoking cessation
- 95% of appropriate staff trained to Level 2 smoking cessation
- 95% of service receivers admitted to our wards will have their smoking status assessed and recorded in the smoking cessation care plan if required
- 95% of service receivers under the care of community teams will have their smoking status assessed and recorded in the smoking cessation care plan if required as part of their annual health review
- A reduction in smoking related incidents.
